PRESENTACIÓN

Se presenta el Volumen número dieciséis (16) del Boletín de Movimientos Fuertes, el cual contiene la información acelerográfica registrada por la Red Nacional de Acelerógrafos de Colombia (RNAC) del INGEOMINAS y redes de acelerógrafos de otras entidades, durante el año 2010. Este boletín muestra los parámetros epicentrales de los sismos, así como la aceleración máxima de cada una de las componentes del movimiento y los espectros de respuesta de aceleración para un amortiguamiento del 5%. En esta ocasión se incluye el procesamiento de los sismos ocurridos en: Los Santos (Santander) del 2 de febrero de 2010 y Ortega (Tolima) del 29 de Julio de 2010; considerados como los más destacados de los registrados durante el año 2010, por su magnitud, profundidad y número de registros disponibles.

Además, se presentan las aceleraciones de 445 sismos registrados por la RNAC durante el 2010, que corresponden a sismos con magnitud mayor o igual a 4.0 o sismos sin datos de localización, los cuales en su mayoría se asocian a los reportados por la Red Sismológica Nacional de Colombia (RSNC), así como por el Observatorio Vulcanológico y Sismológico de Pasto del INGEOMINAS, la Fundación Venezolana de Investigaciones Sismológicas (FUNVISIS) de Venezuela, El Instituto Geofísico –Escuela Politécnica Nacional de Ecuador, el Instituto Geofísico del Perú, el Servicio sismológico de Chile – Universidad de Chile y U.S. Geological Survey (USGS) de los Estados Unidos de donde se obtienen los datos epicentrales.
