

Geological legend (Legenda geológica) and description of units (Descripción de las unidades cronostratigráficas). The legend lists units from Holocene to Paleoproterozoic, categorized by age and type. The description provides detailed characteristics for each unit, such as rock types and tectonic settings.

Stratigraphic coding criteria (Criterios litológicos de codificación). This table defines the symbols used for different rock types: Igneas (Volcánicas, Hipobásicas, Plutónicas), Rocas (Volcanoclasticas, Sedimentarias), and Metamórficas (Metamórficas). It includes symbols for different grades and types of rocks.

Geological conventions (Convenciones geológicas) and summary (Resumen). The conventions section lists symbols for various geological features like faults, folds, and unconformities. The summary section provides a brief overview of the map's content and the data sources used.

Service information and metadata for the geological atlas. It includes the logo of the Servicio Geológico Colombiano, the title 'Atlas Geológico de Colombia 2023', the author 'Plancha 5-06', the scale 'Escala 1:500 000', and a list of references.

Information sources (Fuentes de información). A table listing the various geological maps and publications that served as references for this atlas.

Additional text providing details about the data sources and the methodology used in the compilation of the geological map.

Summary (Resumen) and additional notes. This section provides a concise overview of the map's content and includes any additional information relevant to the user.
